

PAT – PIC – PAL (TEKNO)

Our Three Most Popular Models

All doors adhere to Wind Load (New Regulation) UNI EN 12424 CLASS 1 (standard External Rating) and can be upgraded. Standard items include delivery, hood and motor cover, two sets of safety photocells, electro-optical safety bottom edge, etc.

Maximum "Standard" Dimensions (W x H)

MIO-PAT	4000 x 5000
MIO-PIC	8000 x 6000
MIO-PAL	6000 x 5000

NB – MIO-TEKNO is exactly the same specification as the MIO-PAL only restricted to 4000 x 4000 max. However, being classed as an entry level door, it is priced even more competitively! Please ask about it.

Choice of Over 20 no. Curtain Colours on all models ↓↓

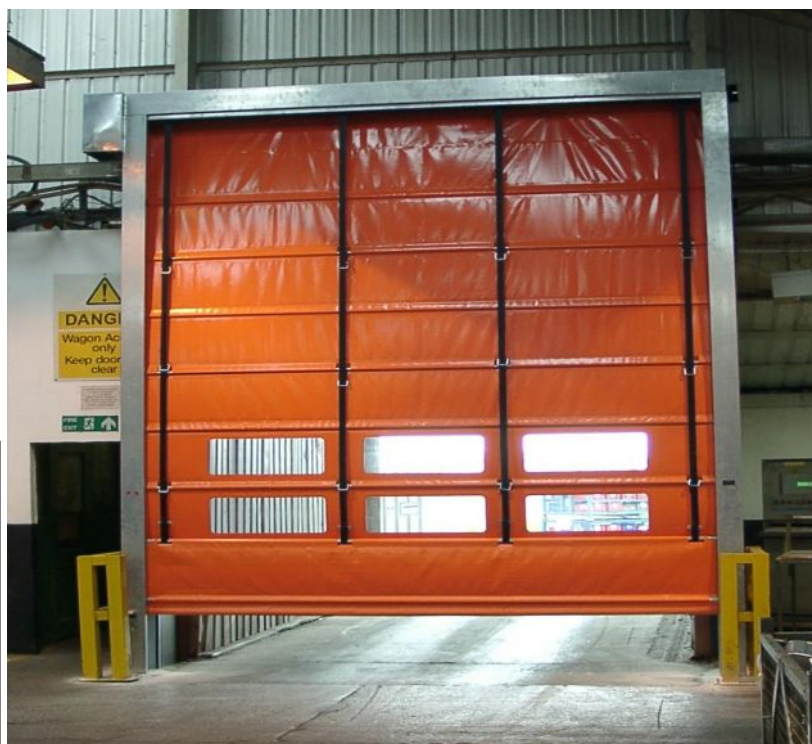

The PAT can have additional 750mm deep (Full Width) Vision Panels or be Fully Transparent ↓↓

(↑↑ - above) The MIO-PAT is a roll-up door. It is robust, competitively priced and comes with interchangeable sections which, in the event of curtain damage, can easily be replaced. This is primarily an internal door, however being external rated, it is commonly used outside when not exposed to above average conditions. As with all our doors, a full range of opening systems, Loops. Radar. Radio Control. etc. are available.

(↓↓ - below) The MIO-PIC is a fold-up door and is generally used for the larger openings or where more windy conditions exist. It is still one of the most popular models and was indeed the original design that was sold in Western Europe before the roll-up type. This door is rugged and reliable and has been at the forefront of Marcott sales for many years.

(↑↑ - above) The MIO-PAL is a High Speed Door that is considered the "workhorse" of the roll-up range. A one-piece twin-moulded polyester fabric curtain reinforced by steel tubes within, makes it equally suited for internal or external applications. As with all these doors, a side-mounted motor is standard, however, forward-facing motors are available on these models. The MIO-PAL Range also offers a counterbalance model for Emergency Lifting where required.
